Hi Everyone!

As the days get shorter and the weather turns, I hope you're finding time for a little flying and perhaps a building project or two. I'd also like to thank the veterans in our club and community for their service.

First, congratulations to newly elected board members **Jim Goodwin, Joe Giamona, and Corey Kelmel**, and to **Shai Hinitz** on his reelection. Thank you for stepping up to serve! I'm really proud of our board and look forward to seeing what comes next!

Speaking what's coming, your board has been busy looking ahead to next year and exploring ways to make the field welcoming, safe, and enjoyable for everyone.

**Field improvements:** We're continuing work on the field entrance fence and archway, including design details, contractor pricing, and coordination with the park.  We're fortunate to call Marymoor Park home and to have such a supportive partner in King County Parks. Through its Community Partner Grant, the county is expected to cover most, if not all, of the cost of our new entrance fence and archway. We're grateful for their investment in the field and in our club's future. There's still work to do before those plans are finalized, but we'll share updates as they come together.

We're also exploring the idea of replacing flight stations 1 through 5 with a single continuous fence along the flightline. This is **an idea under discussion, not an approved change**. Before making a decision, we need to look at designs, costs, park requirements, and permits, and of course we'd like to hear what you think.

**Member poll:** Would you support exploring a continuous flight line in place of individual flight stations? **Yes or No**. Please feel free to reply to this email or shoot me a message with your answer and feedback.  I'd love to hear any thoughts or concerns.

**Supporting young aviators:** The board is reviewing a proposed Young Aviators Program to give our youth members more opportunities to learn, lead, and work alongside experienced club members. The board plans to consider the proposal in December; the details are still being developed. Our goal is to create opportunities and partnerships that strengthen the whole club.

The board also voted to sponsor a Marymoor RC Club UAS4STEM beginner team by contributing half of its registration fee. It's an opportunity to support young people as they explore aviation and technology.

I hope to see you at an upcoming meeting and at the field. Thank you for being part of the Marymoor RC Club community!

Dry skies and good vibes,

Chris Adamski and your Board of Directors
